## Introduction

Stay in touch with your customers by showing them Newsletter addon where they can subscribe to get discounts, promotion, regular news or product updates.

1 pic. Newsletter popup - fully customizable (check Configuration section)

Shortly on how it works:

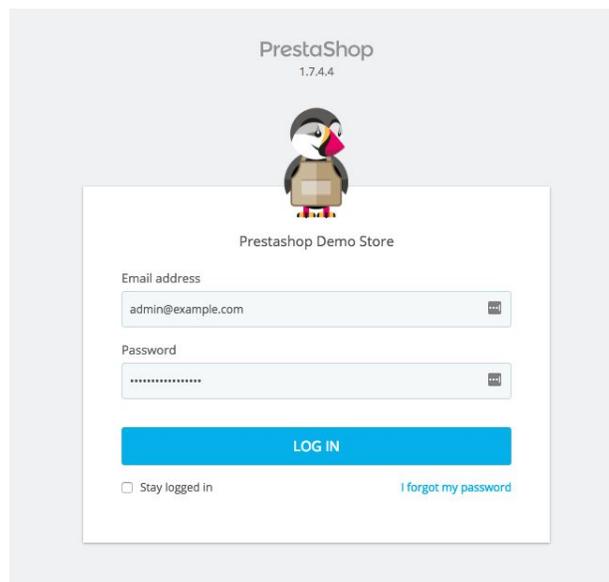

- 1) User arrives at your shop.
- 2) Your shop shows newsletter popup. A user is not forced to enter his email - he can skip it. But if a user decides to apply - he enters an email address to the form and clicks Submit button.
- 3) System stores user email into the database and, if you want, to MailChimp list.

No technical knowledge is needed to work with this module.

## How to Install

Takes 2 minutes or less.

Login into your shop backend:

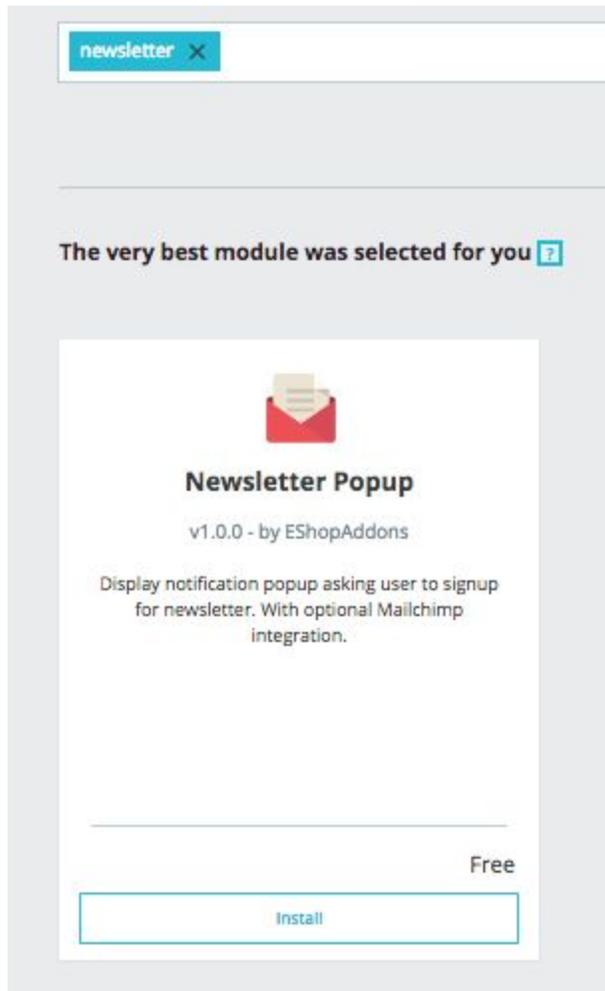

2 pic. Backend login page

In the left sidebar find **Improve** section and click **Modules > Modules & Services** link.

Find **Selection** tab and click it.

From there, find module by typing **newsletters** and install it. See next page for the screenshot.

3 pic. Module installation page

That's it!

See the following sections to see how you can start using it.

## Configuration

After module install it won't show up on frontend (for the users). You have to enable it first.

Click on "Configure" button and in opened configuration page enable it:

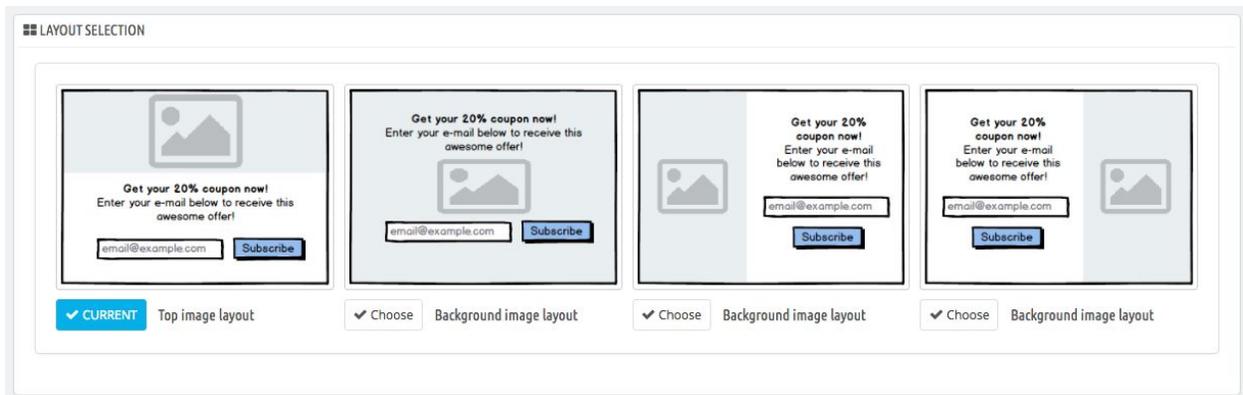

4 pic. Enabling module

Once it's enabled - it will be turned on and visible to all the visitors.

From this page please explore all the configuration options.

Choose popup layout you want from **Layout** section:

5 pic. Layout selection

Layout configuration including texts, images, buttons, and all the colors will be below this section.

## MailChimp Integration

MailChimp is fully optional, but well, it's TOP 1 solution for mailing subscribers. We strongly suggest to use it as it has great and simple UI, but also a lot of user tracking abilities.

Enter MailChimp details and enable this feature:

Enabled  YES  NO  
*Enable subscribers saving to Mailchimp.*

API Key  en ▼  
*In Mailchimp UI this can be found in Account > Extras > API Keys.*

List ID  en ▼  
*In Mailchimp UI this can be found in List > Settings > List name and defaults.*

6 pic. MailChimp configuration

Find **API Key** under Mailchimp Account settings > Extras > API Keys.

Find **List ID** under selected Mailchimp List > Settings > List name and campaign defaults.

Note: every mail address is still saved to the system. So you never lose the information when enabling/disabling module.

Disabling MailChimp won't remove any emails from the given List.

## Contact Us

We hope this **Newsletters Addon** will be a great addition to your site.

Please leave positive feedback if you like our work!

If you have any questions regarding this module please contact our support:
